Paper III – Psychiatric Social Work Research and Statistics

Time: 3 hrs

Max marks:80

- *Answer all questions to the point neatly and legibly • Do not leave any blank pages between answers • Indicate the question number correctly for the answer in the margin space*
- *Answer all parts of a single question together • Leave sufficient space between answers*
- *Draw table/diagrams/flow charts wherever necessary*

Essays:

(4x16=64)

1. Sumita's research is on social workers and their stress, job satisfaction and burnout. She has used standardized tools to measure them. She wants to assess
(a) If stress differs with respect to gender (b) If stress and job satisfaction are related.
Please suggest a statistical test, and give the reasons for suggestion. Also, write about the data requirements and assumptions of the test.
2. Name any tool used in social work research. Explain the importance of reliability and validity of a tool; highlight the importance with respect to this tool. Describe any two measures of reliability and validity.
3. Explain why a researcher should employ qualitative research methods. Describe any situation in which qualitative research methodology would be more advantageous than quantitative. Describe in detail, any one approach in qualitative research.
4. Discuss sampling techniques - give examples for each type of sampling. Differentiate probability sampling and non-probability sampling

Short Notes:

(2x8=16)

5. Describe the importance of consent. What information should be included in a consent form
6. Differentiate qualitative and quantitative variables with examples, also explain the descriptive statistics and graphical measures that can be used to represent them.
